

# The Human Skeleton

Can you find out the position of some bones in your skeleton?

Find out where these bones are and label them on the skeleton below.

skull

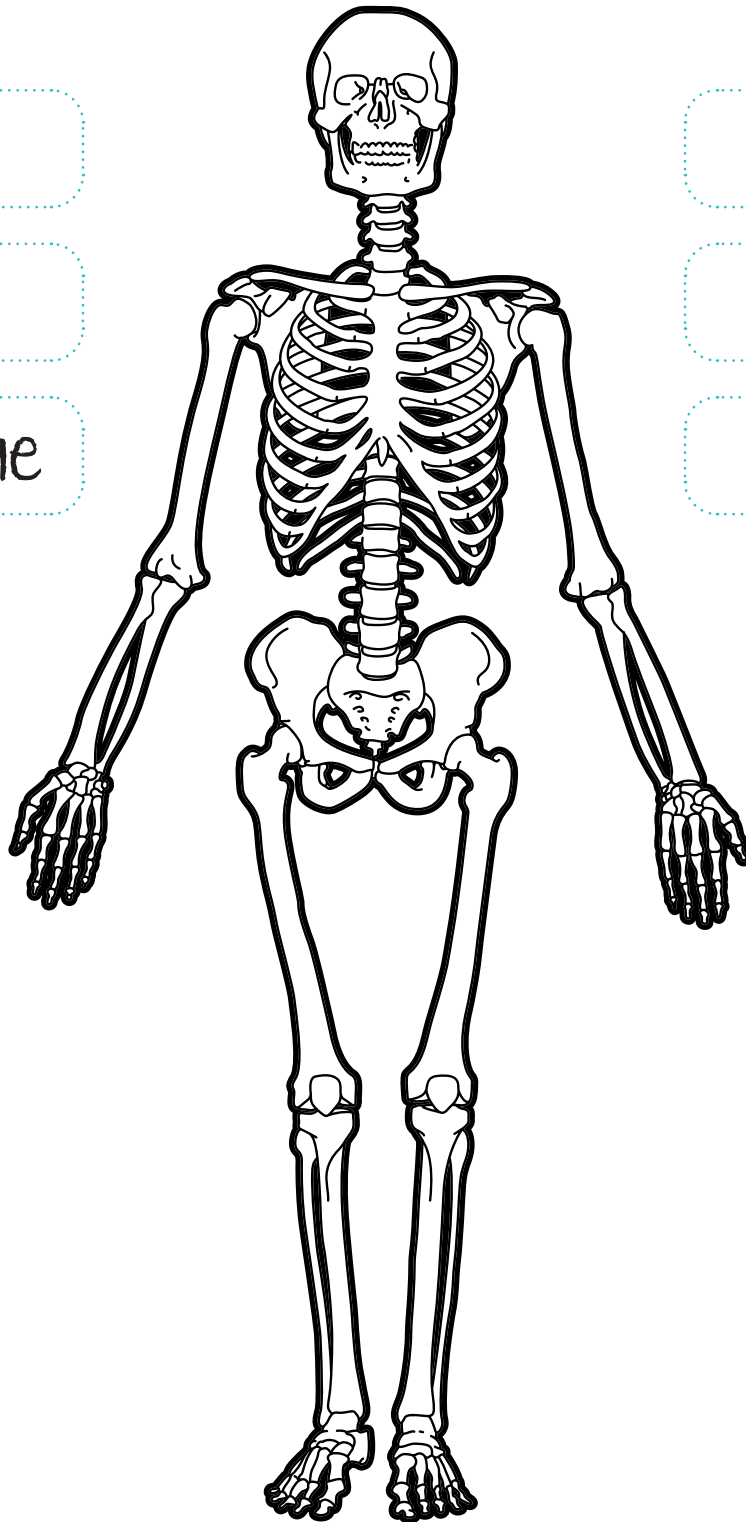

pelvis

vertebrae

patella

humerus

ribs

Do you know how many bones there are in the human body?

The skeleton has three functions; to support; to protect organs; and to help movement.

How does the skeleton support the human body?

---

---

---

---

How does the skeleton protect organs?

---

---

---

---

How does the skeleton help our bodies to move?

---

---
