### Year One

Vocabulary	Definition	Example
<b>Analogue clock</b>	An analogue clock measures time using hands around a dial.	
<b>Anticlockwise</b>	When something turns anticlockwise, it goes round in the opposite direction to the hands on a clock.	
<b>Approximate</b>	An approximate answer is very close to the correct answer, but not exact.	<b>The length of the room is approximately 6 metres.</b>
<b>Array</b>	An array is a regular arrangement of numbers or objects. It has rows and columns, usually in the form of a rectangle.	
<b>Bar chart</b>	A bar chart is a diagram used to represent statistical information using rows of horizontal or vertical bars. The bars have equal width and the length of each bar shows a certain amount. They are sometimes called bar graphs.	
<b>Base</b>	The base of a shape or object is the bottom line or surface on which it rests.	
<b>Beside</b>	To be beside something is to be close or next to it.	
<b>Block graph</b>	A block graph uses blocks to represent statistical data. Each block in a column or row represents one object or recording.	
<b>Beyond</b>	To be beyond something is to be further than it or past it.	<b>The trees are beyond the field.</b>

### Year One

Vocabulary	Definition	Example
<b>Calculate</b>	<b>To calculate is to use numbers to work out an answer.</b>	<b>Calculate the sum of these numbers: 2, 4, 6 and 8</b>
<b>Calendar</b>	<b>A calendar is a system for counting the years and dividing the years into months and days.</b>	
<b>Carroll diagram</b>	<b>A carroll diagram is a grid used to sort things into groups or sets.</b>	
<b>Chronological</b>	<b>When items are arranged in order of time, starting with the earliest, they are in chronological order.</b>	<b>These years are in chronological order: 1934, 1966, 1988, 2000.</b>
<b>Clockwise</b>	<b>When something turns clockwise it goes round in the same direction as the hands on a clock.</b>	
<b>Cone</b>	<b>A cone is a 3D shape with a circular base and a vertex above the centre of the base. Line segments join all the points of the circle to the vertex forming a curved surface.</b>	
<b>Continuous surface</b>	<b>An outer boundary of a 3-D object which is uninterrupted by any plane surfaces.</b>	
<b>Data</b>	<b>Data is a set of numbers or information that can be collected, measured or recorded.</b>	<b>Lists of names and addresses are examples of data.</b>
<b>Decreasing</b>	<b>Becoming smaller in value. Used in relation to number sequences.</b>	<b>If you decrease a number by 5 you take five away from it.</b>

### Year One

Vocabulary	Definition	Example
<b>Diagram</b>	<b>An illustration, drawing or representation.</b>	
<b>Digit</b>	<b>A digit is any of the ten numerals: 0, 1, 2, 3, 4, 5, 6, 7, 8 or 9. Numbers are made up of digits. The position of a digit in a number gives its value.</b>	<b>The number 654 has three digits.</b>
<b>Divide</b>	<b>To divide means to carry out the operation of division; sharing or grouping a quantity into a number of equal parts.</b>	<b>When you divide 4 by 2 the answer is 2.</b>
<b>Estimate</b>	<b>To estimate a number means to decide roughly how big that number is.</b>	<b>I estimate that there are 50 marbles in the jar.</b>
<b>Even number</b>	<b>An even number can be divided by 2 without leaving a remainder.</b>	
<b>Fraction</b>	<b>A part of a whole number, quantity or shape.</b>	
<b>Half-turn</b>	<b>Half of a full 360 turn.</b>	
<b>Hour</b>	<b>A unit of time lasting 60 minutes. There are 24 hours in one day.</b>	
<b>Increase</b>	<b>If you increase something you make it larger.</b>	<b>If you increase a number by 6 then you add 6 to it.</b>
<b>Kilogram</b>	<b>A kilogram is a measurement of weight or mass in the metric system equal to 1000 grams.</b>	<b>A bag of sugar weighs about 1kg.</b>
<b>Known fact</b>	<b>A number fact which has been committed to memory (or very fast recall) and can be applied fluently to various calculation strategies.</b>

## Mathematical Dictionary

### Year One

Vocabulary	Definition	Example
<b>Left</b>	Indicating the position or direction.	
<b>Litre</b>	A litre (l) is a unit of capacity. There are 1000ml in 1 litre.	A jug normally holds around 1 litre.
<b>Mental calculation</b>	A calculation performed without using a formal written strategy. Simple jottings may aid a mental calculation.	
<b>Metre</b>	A metre is a measurement of length in the metric system. There are 100cm in 1 metre.	A long stride is about one metre long.
<b>Minute</b>	A unit of time. There are 60 seconds in one minute and 60 minutes in one hour.	The second hand takes one minute to go around the watch once.
<b>Oblong</b>	An oblong is a rectangle in which one pair of opposite sides is longer than the other pair.	 oblong
<b>Odd number</b>	When a number is divided by 2 and gives a remainder of 1, it is an odd number.	All odd numbers end with the digits 1, 3, 5, 7 or 9.
<b>Partition</b>	Partitioning involves separating a set into subsets. When a number is partitioned it is split into separate parts.	The number 65 can be partitioned in different ways, including 60 and 5, 50 and 15, or 30 and 35.
<b>Place value</b>	The place value is the position or place of a digit in a number. The same digit has a different value at different places in the number.	In the number 234, the place value of 2 is 200, 3 is 30 and 4 is 4. $200+30+4= 234$

Vocabulary	Definition	Example
<b>Position</b>	<ol style="list-style-type: none"> <li>The position of an object is its place or location. Position can also mean the order in which things are placed.</li> <li>When you put something in a certain place you position it.</li> </ol>	
<b>Pound (sterling)</b>	The official currency of the UK	
<b>Property</b>	A property of a shape or number is a particular fact or feature of it that makes it part of a group with the same properties.	A property of a pyramid is that it has four faces.
<b>Pyramid</b>	A 3D shape with a polygon base and triangular faces that meet at one of the vertices called an apex. The base of a pyramid can be any polygon, such as a triangle or square.	
<b>Quantity</b>	An amount, in some cases given a numerical value.	
<b>Quarter</b>	One of four equal parts of a whole, quantity or object.	
<b>Quarter-turn</b>	A 90-degree rotation, i.e. 1/4 of a 360 degree 'full' turn.	
<b>Repeated addition</b>	Repeated addition is a model for multiplication by repeatedly adding the same amount.	$2+2+2=3 \times 2$

### Year One

Vocabulary	Definition	Example
<b>Repeated subtraction</b>	<b>Repeated subtraction is a model for division by repeatedly subtracting the same amount.</b>	<b><math>15-5-5-5=0</math></b> <b>So 15 divided by 5 equals 3.</b>
<b>Right</b>	<b>Indicating the position or direction.</b>	
<b>Rule</b>	<b>A consistent pattern which allows generalisation. Awareness of a rule allows a pupil to continue a sequence or generate a related sequence.</b>	
<b>Scale</b>	<b>A scale is a marked measuring line.</b>	
<b>Sign</b>	<b>A sign is a symbol that shows the operation to use in a calculation.</b>	
<b>Sphere</b>	<b>A sphere is a solid shape with a curved surface. All the points on the surface of a sphere are exactly the same distance from its centre.</b>	
<b>Table</b>	<b>A table is a list of numbers or information organised in rows and columns.</b>
