

# WORLD SCIENCE DAY!

Today we are going to  
make our own slime!

We will be turning a liquid into a solid.

For your experiment you will need:

Cornflour (maize starch)  
PVA glue  
Food colouring  
Bowl  
Spoon

Step 1: Mix your food colouring into your glue.

Step 2: Slowly add your cornstarch (you need about 3:1 ratio of cornstarch to glue).

Step 3: Then stir your mixture until it starts to form slime. You made need to knead it.

Remember to take  
photos of your  
experiment!
