(Use images of equivalence) $2/3 \times 2 = 4/6$ Add/subtract as before. $\frac{4}{6} + \frac{1}{6} = \frac{5}{6} \qquad \text{or} \qquad \frac{4}{6} - \frac{1}{6} = \frac{3}{6}$ <p>Multiply fractions and mixed numbers by whole number.</p> <p style="text-align: center; color: green;">Show the fraction visually—5 lots of 4/5</p> <p>$4/5 \times 5 =$</p> <ol style="list-style-type: none"> Multiply whole number by numerator. $4 \times 5 = 20$ Denominator stays the same. <p>$\frac{20}{5}$ Count the parts on the visual representation 5 to prove there are 20 e.g slices of pizza.</p> <ol style="list-style-type: none"> Then simplify & convert to mixed number if needed. $\frac{20}{5} \div 5 = \frac{4}{1} \text{ or } 4 \text{ wholes}$ |

Year
6

Formal columnar method to include carrying, varied place value, several numbers and decimals with numbers up to 1,000,000

$$\begin{array}{r} 2\ 3\ 4\ 5\ 6\ 7\ 1\ \bullet\ 6 \\ 1\ 9\ 2\ 1\ 6\ 0\ 3\ \bullet\ 5 \\ \hline 4\ 2\ 6\ 7\ 2\ 7\ 5\ \bullet\ 1 \\ 1\ \qquad 1\ \qquad 1 \end{array}$$

Formal columnar method to include borrowing, varied place value and decimals with numbers up to 1,000,000

$$\begin{array}{r} 1\ 1\ \qquad\qquad\qquad 6\ 1 \\ \cancel{2}\ 3\ 4\ 5\ 6\ \cancel{7}\ 1\ \bullet\ 6 \\ 1\ 9\ 2\ 1\ 6\ 0\ 3\ \bullet\ 5 \\ \hline 0\ 4\ 2\ 4\ 0\ 6\ 8\ \bullet\ 1 \end{array}$$

Columnar method with 4 digit by 2 digit numbers

$$\begin{array}{r} 124 \\ \times 26 \\ \hline 744 \\ 2480 \\ \hline 3224 \\ 11 \end{array}$$

Answer: 3224

Short division method with 4 digits by 2 digits, with remainders as whole numbers, fractions or rounding as context

$$\begin{array}{r} 496 \div 11 \text{ becomes} \\ \begin{array}{r} 45\ r1 \\ 11 \overline{) 496} \\ \underline{44} \\ 56 \\ \underline{55} \\ 1 \end{array} \\ \text{Answer: } 45\frac{1}{11} \end{array}$$

Long division method

$$\begin{array}{r} 432 \div 15 \text{ becomes} \\ \begin{array}{r} 28\ r12 \\ 15 \overline{) 432} \\ \underline{30} \\ 132 \\ \underline{150} \\ 120 \\ \underline{120} \\ 0 \end{array} \end{array}$$

432 ÷ 15 becomes

$$\begin{array}{r} 28 \\ 15 \overline{) 432} \\ \underline{30} \\ 132 \\ \underline{150} \\ 120 \\ \underline{120} \\ 0 \end{array}$$

$\frac{12}{15} = \frac{4}{5}$ Answer: $28\frac{4}{5}$

432 ÷ 15 becomes

$$\begin{array}{r} 28 \cdot 8 \\ 15 \overline{) 432 \cdot 0} \\ \underline{30} \downarrow \\ 132 \\ \underline{150} \downarrow \\ 120 \\ \underline{120} \\ 0 \end{array}$$

Answer: 28.8

Add & subtract fractions with different denominators and mixed numbers, using concept of equivalent fractions.

Add

1. Convert fractions to same denominator or mixed number to fraction (use equivalent images to support).

E.g. $\frac{2}{3} + \frac{1}{6} = \frac{2}{3} \times 2 = \frac{4}{6}$
 $1\frac{2}{3} + \frac{1}{6} = 1\text{whole} = \frac{3}{3} + \frac{2}{3} = \frac{5}{3}$
 $\frac{5}{3} \times 2 = \frac{10}{6}$

2. Add numerators, keep denominator the same.

3. Simplify if possible.

Subtract

1. Repeat step 1 above.

2. Subtract numerators, keep denominator the same.

3. Simplify if possible.

Multiply simple pairs of proper fractions, with answer in simplest form.

E.g.

1. Multiply numerators by each other.

2. Multiply denominators by each other.

3. Simplify if possible.

Divide proper fractions by whole numbers.

E.g.

1. Change ÷ to x.

2. Multiply denominator by whole number.

3. Simplify if possible.
